CAREER OBJECTIVE

I'm a dedicated computer science graduate and detail-oriented team player seeking a full-time Software Engineer position. I am passionate about ethical practices, lifelong learning and staying current with the latest methodologies. I am eager to utilise my skills to help achieve company goals and grow as a professional. I thrive in environments that promote personal and professional growth and support team members in reaching their full potential.

EXPERIENCE

Software Engineer

KNUST-UITs | 2023 - Present

- Designed flowcharts for a bulk messaging system, TekNotify, using Lucidchart and draw.io.
- Contributed to the development of TekNotify, using Django, RabbitMQ, and Celery Beat.
- Simulated databases with Faker for testing phone number data in TekNotify.
- Documented development procedures to create valuable reference materials using Sphinx.
- Learned API development with C# and ASP.Net Core, and explored frontend frameworks like Blazor and Mudblazor.
- Gained knowledge on building Progressive Web Apps and their benefits.
- Assisted in database modelling with ER Studio and created databases and stored procedures for API development.

DIGILOG Hackathon Project

DIGILOG| June 19th - 23rd, 2023

- Tackled industrial problems presented by APPNET, Xminger, MAPTECH, and m&m delivery with a team.
- Addressed fuel management, surveyor-client, and delivery system issues.
- Communicated effectively with team members and stakeholders.

PROJECTS

- **CURL** (cu.rl): URL shortening app built with Django, HTML, CSS, Bootstrap, DRF, and PostgreSQL. Includes analytics (platform, OS, location). Learned Django and DRF, frontend-backend integration, and database management.
- **Airbnb Clone:** An ALX related project. Simplified version of Airbnb using Nginx, Flask, MSSQL, Puppet, Certbot, and Datadog. Gained experience in web application deployment, load balancing, and monitoring.
- **Simple Shell:** An ALX related project. Developed a custom shell in C. Learned about process management, error handling, and command execution.
- **Custom Printf:** An ALX related project. Created a custom printf function in C using variadic functions. Enhanced understanding of data handling and formatting.

EDUCATION

Kwame Nkrumah University of Science and Technoloy (KNUST)

Bachelor's Degree in Computer Science
2019 – 2023
First Class Honors

ALX Software Engineering Programme(12 months)

Backend Engineering Specialisation
July 2023 - August 2024

RELEVANT COURSES

- Software Engineering Fundamentals, Data Structures and Algorithms, Systems Design, DevOps Practices, Frontend and Backend Development, Database Management (SQL and NoSQL), Version Control with Git, Test-Driven Development (TDD), CI/CD

SKILLS

Technical Skills:

- **Languages:** Python, JavaScript (jQuery, Ajax, TypeScript), C, C#, HTML/CSS
- **Backend Technologies:** MySQL, MSSMS, SQLite, MongoDB, PostgreSQL
- **Load Balancing:** HAProxy
- **Web Servers:** Nginx
- **SSL Certificates:** Certbot
- **Operating Systems:** Linux command line
- **Web Development:** JavaScript, HTML, CSS, Bootstrap
- **Frameworks:** Django, Flask, DRF, FastAPI, ASP.NET web API, NodeJS, ExpressJS
- **Version Control:** Git
- **Automation and Configuration Management:** Puppet, Fabric
- **Other:** Knowledge of coding standards

Additional Skills and Qualities:

- Critical thinking, attention to detail, effective communication, teamwork, problem-solving, adaptability, project management
